Cornstarch

Cornstarch packaging is biodegradable and compostable. It breaks down naturally in composting conditions, reducing landfill waste.

- Fermentation: Cornstarch is broken down through a fermentation process to produce lactic acid.
Polymerization: The lactic acid is then polymerized to form polylactic acid (PLA).
- Molding and Shaping: PLA is processed and molded into various packaging products.

Cornstarch Products

SKU: WURABA01

Suitable for hot, cold, and oily food
